

Verdant Operations

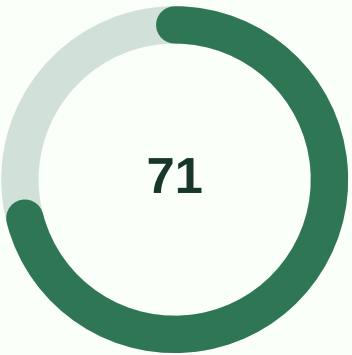

2026 environmental performance across energy, water, materials, and logistics

Verdant reduced operational emissions while expanding production. The strongest gains came from renewable electricity and packaging redesign; supplier transport remains the largest unresolved source.

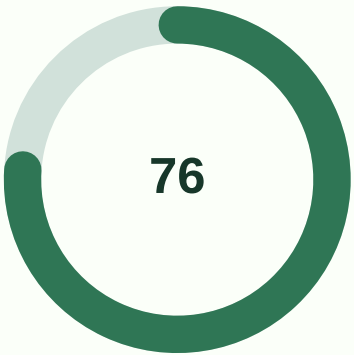

ENERGY

WATER

MATERIALS

FREIGHT

Energy

Two sites completed heat-pump conversions and all offices now purchase renewable electricity.

Materials

A mono-material refill pouch removed 14 tonnes of mixed laminate from the annual system.

Priority

Create supplier lane-level emissions baselines and shift priority routes to rail where feasible.
